Which app to use for Emby and Silo

The best app for films and shows on each device, and how to sign in.

Emby and Silo are for films and box sets you pick and play, not live TV channels. You watch them in an Emby app. The app you use decides how well 4K, HDR and surround sound play.

Pick your device

- **Apple TV:** the Silo or Emby app from the App Store. **Infuse** is a good alternative: it plays almost every film directly, including 4K HDR and Dolby Vision.
- **Fire TV Stick:** the Emby app from the Amazon Appstore (search "Emby").
- **Nvidia Shield, Android TV and Google TV:** the Emby app from the Google Play Store. The Shield plays nearly every 4K film without converting it.
- **Samsung and LG TVs:** the Emby app from the TV's own app store. TV apps support fewer subtitle and sound formats, so a streaming stick usually works better for 4K.
- **iPhone and iPad:** the Emby app or Infuse from the App Store.
- **Android phones and tablets:** the Emby app from the Play Store.
- **Computer:** open the server address in your web browser.

Sign in

1. Open the app and choose to add a server (it may say **Connect to server** or **Add server**).
2. Type the server address: `Your server URL`
3. Type your **username** and **password**: `Your username` and `Your password`
4. Tap **Sign in**. Your films and shows appear on the home screen.

> **Tip** Your Emby or Silo login is not the same as an IPTV (XC) login. Use the details we gave you for Emby or Silo.
