Enter your login in any other app

Using an app that isn't listed? This works for almost all of them, including UHF on iPhone.

Nearly every player app works the same way.

1. Look for **Add playlist**, **Add user**, **Login** or a **+** button.
2. If it asks what type, choose **Xtream Codes**, **XC** or **Xtream API**. Avoid "M3U" unless we sent you an M3U link.
3. Type the three details: `Your server URL`, `Your username` and `Your password`.
4. Save, then wait for the channels to load.

> **Tip** On an iPhone, we recommend the **UHF** app (or **Nowseen**). In UHF, tap to create a new playlist, choose **Xtream Codes**, then follow step 3.

If it keeps showing an error

- Your username and password are case sensitive. This means capital and small letters must match exactly.
- Your username is usually all small (lowercase) letters.
- Check there are no extra spaces before or after each detail.
- Moved over from an older service? Your server address may have changed. Open a ticket and we'll send you the current `Your server URL`.

> **Tip** If the app only takes an M3U link or a "MAC address", open a ticket and tell us the app's name. We'll help.
