Set up a VPN on Apple TV

Apple TV supports VPN apps from tvOS 17. Here's how to switch one on.

> **Note** You need tvOS 17 or newer. Check in **Settings → System → Software Updates**.

1. Open the **App Store** and search for your VPN's name.
2. Choose **Get** to install it, then open it.
3. Sign in with your VPN account.
4. When asked to add a VPN configuration, choose **Allow**.
5. Choose a server in your own country and **Connect**.
6. Go back to the home screen and open your player app.

> **Tip** Not every VPN has an Apple TV app yet. If yours doesn't, setting the VPN up on your router covers every device at home.
